

## When to Push the Button

As an extension of your bedside team, we encourage you to push the button to initiate support at any time without limitations. It is best practice to engage eCare for the following events.

- To initiate communication: Physician-to-Physician, Nurse-to-Physician, Nurse-to-Nurse
- Upon patient arrival to unit
- Bedside procedures: bronchoscopy, chest tube, GI studies, dialysis, echo, others
- Intubate and extubate
- Anytime the patient leaves the room
- Critical bedside labs, including hyperglycemia
- Change in patient's status
- Cardiac and respiratory arrests, or other emergent situations
- Invasive line placement: central, arterial, dialysis catheters, ICP/ventriculostomy, others
- Initiation of IV drips: vasoactive drugs, continuous sedation, paralytics, insulin, antiarrhythmics
