### Respiratory Therapy Consult Documentation

Consulted to assist with adjusting alarms and bipap settings

Suggested an increase in settings from 10/4 to 16/8 to help with initial ABG.  
Advised to repeat ABG after 45 minutes of being on bipap. Site had troubles maintaining SP02 reading.

Follow up phone call for new ABG (report of difficult poke and very dark blood).  
Advised to increase bipap once again and repeat ABG. Site is going to continue to monitor patient and will call back with further questions.
